Spinal MasterCLASS

Every year, around the world, between 250 000 and 500 000 people suffer a spinal cord injury (SCI). They are a growing population with more complex and frequent than usual health presentations, the majority happening in healthcare facilities which are non-spinal specific.

It is very challenging to meet the specialised needs of this group of clients without having a specific training and understanding of their health care needs.

Course Content

We have put together an overview of SCI management, tracking the journey from acute care to the key rehabilitation processes and interventions continuing towards longer term challenges with spinal cord injury. Various topics presented by subject experts encouraging active interaction. Key best practise messages will be summarised to give you more confidence in dealing with Spinal Cord injured Clients and provide appropriate care.

Who will benefit?

- Rehabilitation medicine trainees
- Allied health and Nursing professionals
- Specialists & GPs wanting to brush up & update their knowledge in SCI care.

Topics covered

- ASIA assessment
- Acute surgical and medical management
- Spasticity
- Bladder and bowel issues
- Skin and pressure area
- SCI & Pain
- Sexuality and fertility
- Multidisciplinary team roles
- Wheelchair and equipment
- Vocation and return to work
- Patient perspectives
- Case discussions
